

RadCure – Matting Solutions for Any Technology

Radiation-curing technologies (RadCure) are transforming the coatings industry, offering rapid curing, energy efficiency, and reduced environmental impact. The right matting solution can help formulators achieve precise gloss control, enhanced surface properties, improved rheology, and reliable performance in radiation-cured coatings. In this session, explore Grace's innovative silica-based matting agents designed to meet the challenges and opportunities presented by RadCure systems, including UV, electron beam, and excimer curing.

Michael Bulanov is a Technical Customer Service Manager, Coatings at Grace GmbH. An industry professional with 20 years of experience in Coatings, Adhesives, and Sealants, he holds a Ph.D. from the State University of Moscow, Russia in Organic Chemistry. Prior to joining Grace, he worked at Kraton, Bayer MaterialScience and Covestro.
