

TEGO® Res 1100 – a co-binder enabling circularity

The packaging world is actively working on increasing the recycled material content in packaging. For that high quality recyclates are needed. De-inking is the key technology to provide high quality recyclates.

TEGO® Res 1100 was designed to significantly improve the deinking properties of packaging inks with regards to speed, energy consumption and final recyclate quality.

Presenter: Dr. Christian Schirrmacher, AT Inks and Digital, Evonik Operations GmbH
