Title: Sipomer® MAC: Enhance Adhesion and Corrosion Resistance with This Innovative Monomer

Speaker Ms Diulia Caroline Quites Rodrigues, Syensqo

Sipomer® MAC represents the next generation of specialty monomers, designed to improve adhesion on challenging substrates such as galvanized steel, iron, glass, ceramics, and copper. It also enhances water resistance, gloss, hiding, and durability. Providing advanced corrosion protection, it meets the C3 and C4 corrosion ratings of the ISO 12944-2 standard. When paired with Reactsurf® 2490, a reactive surfactant, its performance is further elevated. Sipomer® MAC offers a sustainable solution for high-performance coatings across a wide range of industrial applications.
