

Accelerating R&D Through a Data-First Approach

Richard Garcia, Director of Sales, Uncountable Inc

As industries strive to maintain a competitive edge, leveraging AI in R&D activities has become a powerful catalyst to spur innovation and efficiency. However, integrating AI and machine learning within the R&D sector necessitates a foundational shift towards structured data management.

This talk covers the significance of structured lab data in fostering innovations and maps out a strategic roadmap for organizations to fully optimize their R&D outcomes.

By understanding and establishing the proper foundation of data, R&D organizations will be well equipped and confident that the data they collect today, continues to add value to the data and experiments they run in the future. Structured data is the key to ensuring better decision-making and a competitive advantage today and in the long term.
