

Abstract ECS 2025 Product Presentation

Dr. Laura DUBRULLE, Lab Manager, IAC Lille, BRENNTAG

WESTLAKE® 2K WATER-BASED EPOXY SYSTEMS FOR VERSATILE APPLICATIONS

The continuing migration from solvent-based to 100% solids and water-borne systems offers clear benefits in respect of the environment and health and safety but is a challenge for many coatings producers as they struggle with increased raw material complexity.

Brenntag, working with state-of-the-art epoxy products from **WESTLAKE®** will demonstrate how many applications, such as; floor sealers, concrete top coats and metal protection products can formulate from a limited number of high performance and versatile epoxy resins and amine hardeners.

Proving there is a great opportunity for manufacturers to cover a wild range of applications while assuring high technical specifications, “more with less”.
