Title

Functional fillers for modern coatings

Abstract

Outlook on the various possibilities of using functional fillers in various industries, for example wood coatings, printing inks, road marking paints as well as corrosion protection systems.

Recent findings have introduced Neuburg Siliceous Earth as a multifaceted natural filler, such as a matting agent. It also stands out for its eco-friendly profile, characterized by a minimal carbon footprint. Additionally it serves as a pigment extender, offering potential for cost reduction.

Get ready for high quality coatings prepared with functional fillers from HOFFMANN MINERAL, Made in Germany.
