

## **Innovating the future with sustainable VISIOMER® specialty methacrylates**

Evonik's VISIOMER® Terra products made from segregated biobased raw materials are a significant step towards more sustainable methacrylate products.

In addition to the use of biobased feedstock, the VISIOMER® eCO product line utilizes mass-balanced raw materials certified by the ISCC PLUS standard.

Both product lines offer innovative methacrylates that help reduce greenhouse gas emissions, fostering a more sustainable future by minimizing the impact on the environment.
