Commercial

Abstract

Mitsubishi Chemical Group offer a broad portfolio of products in the fields of coatings, inks and adhesives, which includes UV-curable resins, epoxy resins, methacrylate monomers, polyester resins, emulsion polymers, as well as acrylic bead resins.

Key sustainable features of our products include: solvent-free, water-borne, bisphenol-free, bio-based and lower processing energy.

This promotional product presentation will feature new resins that provide good adhesion to hard-to-adhere metals and plastics, for example, for use in heat-seal lacquers.
