Accelerate your R&D and design better products with LISSY – smart and seamless data management and AI for formulation development, raw material management, LCA and deep insights

Speaker: Dipl-Infom. Mike Bach, CEO PRISMA innovative Software, Weilburg

Have you ever considered that up to 80% of a product's environmental impact is determined in the design phase? How do you ensure that your R&D decisions lead to both high-performance and sustainable products? LISSY empowers you with smart, seamless data management and AI-driven insights to accelerate formulation development, optimize raw material management, and integrate Life Cycle Analysis (LCA) from the start. With LISSY, you can graphically compare key data points like IR spectra or flow curves, gaining deeper insights through AI-powered analysis. By leveraging AI, you streamline workflows, reduce development cycles, and make data-backed decisions with confidence. LISSY enhances traceability, collaboration, and compliance, helping you innovate efficiently while minimizing risks and costs. With advanced analytics and automation, you can create better, more sustainable products—faster. Take your R&D to the next level with intelligent, future-ready solutions. Are you ready to transform the way you design?
