

TEGO® Foamex – Defoamer range for Architectural Coatings

New binder systems and changing regulations are just two of the many reasons and challenges for developments in the field of defoamers. The increasing demand for bio-based and more sustainable solutions is also driving the innovation processes and leading to new products in the portfolio of Evonik Coating Additives. Providing an overview of the portfolio of defoamers for architectural coatings based on waterborne formulations enables the formulators to find always the right balance between defoaming efficacy and compatibility.

Presenter: Jonas Berg, Manager Applied Research & Technology Architectural and Floor Coatings EMEA, Evonik Operations GmbH
