Silanated waterbased dispersions – new Alberdingk products for construction applications

Dr. Benjamin Souharce

b.souharce@alberdingk-boley.de

ALBERDINGK BOLEY will give an overview of the latest work on styrene acrylic dispersions for construction applications. So called silanated styrene acrylics are especially used to improve adhesion to glassy surfaces or in cement free pasty alternatives to dry mix products such as mortar or tile adhesives. For that purpose, ALBERDINGK BOLEY will launch 2 new ALBERDINGK® AS-grades in 2023. ALBERDINGK BOLEY is also already working on further developments in order to improve its footprint in these markets by providing new solutions to customers.
