

Lackrohstoffe:

Renewable resource-based polymers for wood, metal and architectural coatings

Markus Dimmers,

m.dimmers@alberdingk-boley.de

ALBERDINGK BOLEY will give an overview of the latest developments in acrylic, styrene acrylic and polyurethane dispersions based on renewable raw materials for all types of applications. Modern polymers based on renewable raw materials are not limited in their application thanks to their high level of performance. Using examples from the fields of lacquers and stains, furniture and metal coatings as well as interior paints, the performance data will be compared with conventional polymer dispersions.
