

Title:

New material,,new revolution,new chance - H₁₂MDA's overall solution for epoxy coating

Name of Speaker:

Prof. MENG ZHOU

Abstract:

In view of the pain points of the floor industry, traditional curing agents are incapable of meeting the requirements, and HMDA has been developed accordingly to solve the problem. Compared with the traditional curing agents, HMDA extends the life cycle of coating and construction efficiency by more than 20% even under VHD usage. With the help of HMDA, no "amine-Blush" occurs on the paint film surface in high humidity environment and it maintains excellent adhesion even if on the substrate with high moisture content. By using HMDA the paint films show enhanced solvent resistance such as ketones and organic acids.
