## **Abstract:**

### **Sustainable Resins for Road Marking Coatings**

Road markings based on 2K cold plastic resins are known for the highest endurance amongst marking materials. As solvent- and VOC-free products, they provide one of the most environmentally friendly road marking solutions, according to life-cycle assessments.

Recently Helios R&D laboratories started the development of resins for 2K cold plastics based on bio-renewable materials which additionally lower the carbon footprint and align with the current environmental trends.
