

Sipomer® PAM 600 : functional monomer to enhance performance of waterborne architectural and industrial coatings

Speaker Dr Diulia Caroline Quites Rodrigues

Sipomer® PAM 600 is a multi-functional specialty monomer for waterborne architectural and industrial coatings, inks, and adhesives markets. In this talk, the benefits of Sipomer® PAM 600 in architectural and industrial coatings are presented.

Sipomer® PAM 600 is designed to address the needs of the architectural coatings market by delivering improved opacity, household stain resistance and removal, and tint strength. Sipomer® PAM 600 can also provide excellent corrosion resistance for industrial coatings and improve adhesion to a variety of substrates such as aluminum, cold-rolled steel, concrete, and glass, without impacting other key performance properties. Moreover, Sipomer® PAM 600 is APE-free and it is easy to handle and to incorporate into waterborne binders.
