

ACHIEVE MATTE COATINGS THROUGH EXCIMER TECHNOLOGY: SARTOMER® UV CURABLE SOLUTIONS

Xavier DRUJON

R&D Manager Sartomer France

Arkema, through its Sartomer® product line, strives to stay ahead of industry trends with an innovative way of meeting customers' challenges, supported by a high level of technical knowledge. The achievement of ultra matte coatings and soft touch effects are part of those challenges, rendered possible through the adoption of Excimer technology.

To meet increasing interest in Excimer curing, we have hand selected specialty acrylate monomers and oligomers for high-performance UV/LED/EB excimer-curable coatings, applicable for automotive, construction, flooring and other consumer goods applications.
