

## **Dynoadd F-46X series: Modified polysiloxane wetting additives that solve your coating problems.**

In Dynoadd, we are committed to the development and delivery of innovative high-performance products and solutions for the most demanding industrial coating applications.

Our new product series **Dynoadd F-46X**, based on siloxane polyether chemistry, provides solutions for application and appearance related challenges.

**Dynoadd F-461** is a 100% active wetting, levelling, and slip additive for waterborne, solvent borne, and UV formulations that prevents defects and increases surface slip. Dynoadd F-461 also reduces foam formation in aqueous systems.

**Dynoadd F-462** is a wetting and levelling additive for waterborne formulations that reduces surface tension, improves substrate wetting, and prevents defects without increasing surface slip.
