

## **Abstract ECS 2023 Product Presentation**

Heike Semmler, Head of Applied Research & Technology Wood Coatings EMEA

### **SPHERILEX® DP-0110 - High durability of your matt wood coating - Longevity for the natural look**

Low gloss, mechanical resistance and nice touch - this is the combination wood coating formulators search for to achieve long lasting, natural-looking wood coatings. EXP 0002-1, the newest and smallest particle in the SPHERILEX® silica family, can be used in combination with classical matting agents to achieve a low 85° gloss and improvements in scratch, mar and burnishing resistance; additionally, these benefits can be obtained with no negative impact on viscosity, even at high silica loading. This small spherical silica-based particle is a new tool in the raw material toolbox that allows formulators to optimize wood coatings and meet market needs and design trends.
