

Abstract ECS 2023 Product Presentation
Dr. Susanne Martens-Kruck, Technical Marketing Manager Building Protection

Sustainable protection for mineral building materials

Now more than ever, we need to save resources where ever possible. With Evonik's product group Protectosil® we can make a significant contribution to the future. By elongating the service life of constructions that are part of the public infrastructure as well as private households, significant amounts of raw materials, energy and CO₂ can be saved.

Within Evonik's product group Protectosil® we have set a focus on the development of water-based products that are in line with the environmental requirements and have a significant impact on the durability of mineral building materials.
