

**97% BIO-BASED WATERBORNE ALKYD EMULSION FOR INTERIOR WALL PAINT:
SYNAQUA® 4856**

Patricia BEURDELEY

Global Marketing Manager - Architectural coatings

Alternative Feedstocks – As resin technologies move toward higher levels of bio-based raw materials, developing highly-renewable products that answer high performance expectations is essential. Arkema is dedicated to developing new resin technologies with high levels of bio-based raw materials while enhancing performance properties such as high gloss, low color, hardness development and scrub resistance. We will present the characteristics and key benefits of our new 97% bio-based alkyd emulsion binder that is APEO, ammonia, solvent and plasticizer-free and showcase its performance in interior wall paint applications.
