

Title

Water-based Resin Systems for General Industrial and Protective Coatings

Speaker

Breva, Pablo

Abstract

A comprehensive understanding of our customers' needs in terms of metal protection and protective coatings, achieved through the joint work of our technical and commercial teams, allows Lubrizol to deliver new technology raw materials that add up to our customers' value chain in the development of protective coatings for metal and general industrial applications.

From topcoats to direct-to-metal solutions, Lubrizol offers a broad Portfolio of water-based polymer dispersions and emulsions intended for the formulation of protective coatings that provide protection and aesthetic value for the industrial transportation and machinery markets.

Leveraging decades of technical and market expertise our solutions address the most compelling needs for metal and industrial parts protection from corrosion or color loss to scratches and other defects not forgetting the protection of worker's health and environment.
