Titel

New generation of highly effective zinc-free Anticorrosive for Coil-and Thin-film-application

The corrosion protection of pre-coated metal sheets is very important. Our HEUCOSIL™ products are a highly effective zinc-free anti-corrosive meeting the specific performance requirements for these thin-film applications. After the successful story of HEUCOSIL™ CTF we now present with our aluminium and magnesium modified silica ion-exchange pigments HEUCOSIL™ CSA and CSM, a new generation of anti-corrosive pigments for the coil coating market. These products convince with an outstanding corrosion protection performance and a significantly low oil absorption. With our continuous R&D efforts we provide our customers hereby a suitable and effective solution.
