

European Coatings Show 2023

Product presentation abstract:

Fire Safety Regulations across industries are becoming increasingly stringent. Huntsman has applied its extensive experience in protective polyurethane coatings to develop technologies which support companies on their way towards attaining various standards while safeguarding production efficiency.

One such example is a new addition to our portfolio, POLYRESYST® IC6005 polyurethane system, which utilizes a novel technology to produce an intumescent coating. Beyond passive fire protection, this fast-curing system provides unique processing features enabling production and performance benefits.
