

Hydrogenated Hydrocarbon Resins based on DCPD/C9 – Innovation in Premium Quality

Rain Carbon is the leading and recognized producer of hydrocarbon resins for adhesives, coatings and rubber formulations. With our hydrogenation plant in Europe, we are part of the resin market trend towards lighter, brighter and more sustainable products. With smart molecular design of precursors and state-of-the-art chemical processes, we serve the markets of existing applications and emerging technologies.

In this presentation, we will showcase NOVARES® pure hydrogenated resins and demonstrate their unique property profiles in terms of compatibility, thermal stability and tackiness. Customizable performance based on a fully controlled precursor structure and high-tech processes will be presented, providing formulators, especially in the adhesives industry, with a strong basis for targeted optimization of their formulations.

Presenter: Dr. Matthias Steffen, Application Specialist Adhesives, Rain Carbon Germany GmbH
