

Lackrohstoffe:

Waterbased polymers for food packaging - innovative barrier solutions against water, moisture and fat

Martina Wienke

m.wienke@alberdingk-boley.de

Modern packaging is made from monomaterials (plastics) and increasingly from paper. Paper usually requires a coating to achieve the desired properties such as water resistance, grease resistance and low water vapor diffusion. Alberdingk Boley presents the latest products for barrier coatings on paper that are based on renewable raw materials and meet the required properties and regulations for food packaging.
